Enthusiastic and passionate professional DevOps Engineer with over 1+ year of hands-on experience in both Development and Operations. Committed to bridging the gap between these two crucial domains, I'm dedicated to harmonizing development and operations, making them work seamlessly together. My dedication lies in optimizing workflows, fostering collaboration, and implementing best practices to enhance overall efficiency and deliver successful outcomes.

## Experience

### Software Developer at Valtech Mobility

2022 - present

- Currently, I am actively involved in a dynamic role where I contribute to a platform that connects over 30 million cars for mobility services. My responsibilities include developing and deploying changes across 10 diverse environments, spanning both on-premise and cloud infrastructure.
- I have also collaborated closely with Original Equipment Manufacturers (OEMs) to seamlessly integrate in-car technology and Internet of Things (IoT) functionalities using IMX8.

### Intern at Abstream Technologies

2020 - 2023

- I delved into the realm of data centers, contributing significantly by orchestrating the setup of physical infrastructure. My responsibilities extended to working on intricate network protocols, virtualization, configuring SAN and NAS devices, and implementing monitoring tools to track storage and server performance.

### Web developer As a Freelancer

2021-2022

- A Team Portfolio to hold a collection of our Work and a platform to showcase our web designing skills. link - <https://bypass-space.web.app/>
- Designed and developed a responsive website for a company called Satvidi Technologies and hosted on satvidi.com domain. link- <https://satvidi.com/>
- A real-time organizational chat application that uses the Firestore database and Google authentication. link - <https://chatbit-682f9.web.app/>
